

Environmental Stewardship

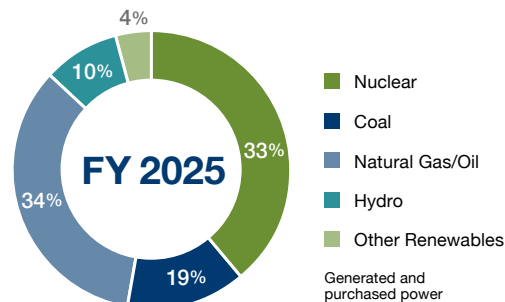

TVA seeks to make life better for the people we serve through the integrated management of our region's resources. Our environmental policy balances a reliable, affordable and secure energy supply for the region with economic growth and environmental responsibility.

TVA dams on the Tennessee River system provide multiple benefits for the public: flood control, navigation, power production, recreation, water quality and water supply, and protection of natural resources. The region we serve is home to a vast array of plant and animal species, including 240 native fish species and some species that occur nowhere else in the world.

Our strategically diversified power generation portfolio supplies reliable, affordable, American energy. TVA is committed to protecting the region's environmental, historical and cultural resources as we supply energy, serve as stewards of the region's natural resources and support a thriving economy.

Robust and Diverse Energy Supply

Driving Economic Activity About \$12 Billion a Year

Results from activities on TVA public lands and waters

TVA Manages Approximately 150 Public Recreation Areas

Including campgrounds, day-use areas and boat launching ramps

Water Source for over 5.2 Million People

For thermoelectric, industrial, public and agricultural needs

In FY 2025

Achieved Best Environmental Compliance Performance in TVA History

In meeting federal environmental regulations

Investing through FY 2028

\$1.5 Billion

To help homes and business save energy and offset load growth

Managing the Tennessee River System

For flood control, navigation, recreation, and other public benefits

Caring for

293,000 acres

Of public land and 11,000 miles of reservoir shoreline
