

Volume 1, No. 16
September 29, 2015

"The Boone Dam Weekly Update" is published each week to help keep TVA's stakeholders informed on the activities associated with repairing the earthen embankment at Boone Dam. These updates and other information are available at TVA's [Boone Project website](#) and via email distribution.

100,000 Safe Work Hours

TVA is committed to the safety of our employees and the public we serve as our highest priority, and the Boone Project team is fulfilling that promise. On September 21, team members completed 100,000 safe work hours for the Boone Project. Some of the activities conducted during this period include test grouting, infrastructure improvements, site preparation for construction, environmental surveys, and investigative studies.

Fish Habitat Improvement

TVA water resources specialist Shannon O'Quinn (left) braved rainy weather to brief Tri-Cities residents, including Elyse Batista, on a Boone fish habitat improvement project during a public information session on September 26. Developed in conjunction with Tennessee Wildlife Resource Agency fisheries biologists, the project will seed up to 400 acres of public and private shoreline with perennial grasses and plants to create improved fish habitats when lake levels return to normal levels.

Property owners who want to do their own seeding and contribute to better fishing on Boone can find guidance on the best types of plants to use in the [September 15 edition of the Boone Dam Weekly Update](#).

How to Receive Regular Updates

If you'd like to be included on the Boone Update email distribution list, please visit Boone Repair and submit your email address where you see "Sign up below to get weekly updates via email".
