

Planned Boone Pool Fluctuations during Testing and Evaluation Period with Transition to Normal Operations by End of July 2022

Proposed Boone pool elevations are "target" elevations for planning purposes only. Actual day-to-day pool levels prior to July 31, 2022 may vary within the range indicated by the light blue shaded region. Deviations from proposed target elevations should be anticipated, and rates of rise may not be precisely uniform. Deviations from target elevations may be necessary to ensure public safety, to maintain appropriate flood protection during rainfall events, to accommodate specific needs of the performance evaluation program, and/or to ensure ongoing conformance to TVA's commitments to the public interest described in its valley-wide reservoir operations plans.
