

TDEC Order Environmental Assessment

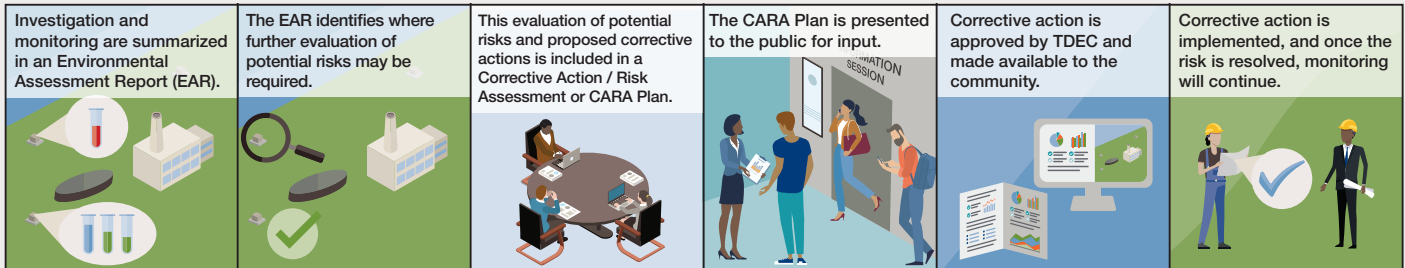

Tennessee Valley Authority (TVA) is conducting environmental studies under the oversight of the Tennessee Department of Environment and Conservation (TDEC) as directed by a Commissioner's Order (TDEC Order). The TDEC Order created a process by which coal combustion residuals (CCR) management units would be assessed for unacceptable risks. It also provides the requirements for reducing these risks through corrective action. The steps for investigating CCR management units and for addressing unacceptable risks are shown below.

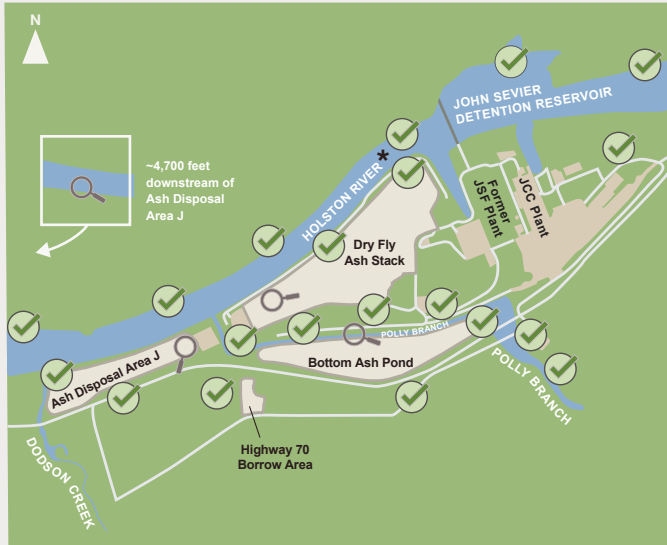

What is the purpose of the assessment?

According to the TDEC Order, the objective of the assessment is to identify impacts to soil, surface water, and groundwater from TVA's management of coal ash in impoundments and landfills at its plant sites.

The assessment also includes evaluating the structural stability and integrity of the coal ash management unit.

John Sevier Fossil Plant Assessment Demonstrates TVA's Responsible Management of Coal Ash

* None of the surface water sample results in the Holston River were above approved levels

CCR Management Unit

Note: Mercury results in Holston River sediments are not depicted on this exhibit nor recommended for further evaluation in the corrective action plan because they are considered unrelated to the retired John Sevier Fossil Plant.

Key Findings

The ecological communities are healthy in the Holston River adjacent to and downstream of the CCR management units based on the results of the environmental assessment and other monitoring efforts.

Nearly all of the environmental sample results were **well below the approved levels**.

The health of the aquatic life is a key indicator of the health of the Holston River. This means that TVA is managing its CCR units in a way that's protective of the environment.

Investigation and Monitoring Findings

These symbols summarize the findings of the investigation and monitoring:

No action is needed.

Further evaluation is required in this area.

Next Steps

With TDEC approval, TVA will use the findings from the environmental assessment to prepare and submit a corrective action plan and will specify all measures TVA plans to take to address unacceptable risk. This corrective action plan will be released for public comment.

TVA's efforts will continue until regulators are satisfied, and monitoring of groundwater will continue for many years.
