Dear Browns Ferry Neighbor,

As in the past, the Tennessee Valley Authority, the state of Alabama and your local emergency management agency are providing you with a calendar that contains important information about Browns Ferry Nuclear Plant.

This calendar contains updated information reflecting additions and changes over the past year. This information will help you better understand Browns Ferry and the emergency plans that have been developed for your protection. Please keep the calendar in a convenient place and readily available. Any previous calendars or brochures concerning emergency information or instructions about Browns Ferry should be discarded.

We realize that some Browns Ferry Neighbors may require additional assistance in the unlikely event of an emergency at the plant. Therefore, we have included a card for you to fill out and return if such assistance is needed.

For your convenience, the card has been pre-addressed, and the postage has been paid. In order for emergency officials to maintain a current list of persons who would need assistance, this card must be returned immediately, even though you may have sent a card from a previous calendar or brochure.

If you have any questions about this material, please call one of the numbers listed on this page, and we will be glad to answer them for you.

Daniel Komm
Site Vice President
Browns Ferry Nuclear Plant
Tennessee Valley Authority

Jeff Smitherman
Director
Alabama Emergency Management Agency
State of Alabama

Scott Harris, M.D.
State Health Officer
Alabama Department of Public Health
State of Alabama

The Prompt Notification System

We expect Browns Ferry Nuclear Plant to operate safely. However, if an incident occurs at the plant, TVA will notify state and local officials at once.

In-depth plans have been prepared by TVA, the state of Alabama, and your local emergency management agency to protect your health and safety, and this calendar is a part of those plans. We want you to be prepared, know what the sirens mean and know what you should do if you hear them.

The Prompt Notification System is a means of informing the public with sirens and tone-alert radios, and providing information through local radio and television stations that are a part of the Emergency Alert System (EAS) and through National Oceanic and Atmospheric Administration (NOAA) Weather Radio messages.

The fixed sirens can be heard within a 10-mile radius of Browns Ferry. If needed, the Prompt Notification System will be activated to quickly inform you and the rest of the public of any potential threat. The sirens and other warning systems are operated by your local emergency management agency. The sirens may be used to warn residents of an emergency other than an incident at Browns Ferry. For example, the sirens may be used to warn the public of floods, tornadoes, or other natural or man-made disasters. If you hear a long, steady siren tone, tune in to your local radio or television station for news and instructions, and check on your neighbors.

If there is an emergency, information will be given over local radio and television stations. If emergency information is not being broadcast and sirens are sounding, there may be a problem with the siren system. If you note a problem with one of the sirens, please call your county emergency management agency using one of the numbers listed on page 1.

If you hear the sirens

Check it out. It could be only a test. Siren tests occur on the first Wednesday of each month at 9:15 a.m. The sirens may not be tested if there is severe weather in your area.

Remember: Hearing a siren or tone-alert radio does not mean you should evacuate. It means turn on your radio or television and listen for instructions.

Tune to one of your local radio or television stations and listen for instructions. These local stations will carry the emergency broadcasts. Initially, information also will be broadcast over the NOAA Weather Radio system (162.400 and 162.475 MHz). Remember, if you are not sure about the sirens, assume the warning is real.

WZYP-FM (104.3)	WRJL-FM (99.9)
WDRM-FM (102.1)	WALW-FM (97.9)
WWTM-AM (1400)	

Check on your neighbors.

If the warning involves an incident at Browns Ferry, you might be advised by radio, television or emergency responders' loudspeakers to go indoors and close all windows, doors and other sources of outside air. If so, stay indoors and turn to page 3 for additional information. If you are asked to leave (evacuate) your area, turn to page 3 for additional information.

Do not use the phone unless absolutely necessary. The phone lines need to be open for emergency workers.

Do not call 911 for information if you hear the sirens.

A “Restricted Access” protective action decision may be issued to the public. If that occurs, all persons are restricted from entering any area in Alabama within the 2-mile Emergency Planning Zone (EPZ) of the Browns Ferry Nuclear Power Plant except for residents of the 2-mile EPZ, authorized radiation emergency workers or Browns Ferry nuclear plant personnel.

If told to “Go Inside – Stay Inside”

- Go indoors and stay there until further notice.
- Lock all doors and windows.
- Do not drive unless it is an emergency.
- Stay tuned to your local radio or television stations listed on page 2 for more instructions.

If you are advised to take shelter indoors

- Go indoors and stay there until further notice.
- Close all doors and windows.
- Shut off all systems that draw outside air into the house, such as furnaces, air conditioners, fireplace vents and dampers.
- Stay tuned to your local EAS radio station (see page 2) or local TV station. These are the best sources for information and instruction.
- Prepare to evacuate.
- If you must go outside, protect your breathing. Place a damp cloth or towel over your nose and mouth.
- If you are told that it is safe to go outside, try to check on your neighbors. They may not have heard the announcements.
- Do not use the phone unless you have an emergency and need help. Leave the lines open for official business.

If you are advised to monitor and prepare

This is a precautionary action to advise the public within the Emergency Planning Zone (EPZ) that a serious emergency at the nuclear plant exists and you should monitor the situation and prepare for the possibility of evacuation, sheltering in place or taking other protective actions.

If you are asked to leave (evacuate) the area

- Stay calm and do not rush. Evacuation can work properly and reduce your risk if you act safely and calmly.
- Take a few items with you. Gather personal items you or your family might need, using the checklist on page 8.
- Turn off lights, appliances and water.
- As you leave, lock your house and tie a white cloth or white towel on your front door to let emergency workers know everyone has left the area.
- Ask your local emergency management agency for pet evacuation procedures during an emergency.
- Use your own transportation or, if possible, ride with a neighbor. Keep car windows and air vents closed and listen to a local radio station.
- Use the map on page 4 of this calendar to find the sector in which you live and the evacuation route you should follow. (Write this information in the space provided next to the map.)
- Follow the evacuation routes shown on the map. Go to the nearest reception center and register as an evacuee. If you become separated from your family, ask the locating service at the reception center to help you find your relatives.
- If you have unique needs or experience problems, call 211 for assistance.
- Dial 711 for TTY/Relay Service.
- Do not self-evacuate if you do not live or work in the designated evacuation sector(s).

If an evacuation is underway, members of the public who are NOT directed to evacuate should remain off the roadways to allow the evacuation to proceed.

Schoolchildren

Children in schools within the 10-mile Emergency Planning Zone will be given top priority during an emergency. Your local school system has an evacuation plan that will be implemented prior to the evacuation of the general public. These plans detail how the students will be transported with supervision to designated locations outside the EPZ. Parents should review their school’s plan to get specific details on where the children will be relocated and when they can be picked up.

Local radio stations will broadcast school information during an emergency.

Where to go

It is important that you follow the evacuation routes shown on the map. These routes are marked with blue-and-white evacuation signs. Go to a reception center within your own county.

Even if you do not plan to stay in a public shelter, you should register as an evacuee. It is important that you register for accountability.

While you are away

Law enforcement officers will secure the evacuated areas to protect homes and businesses. Homes and buildings with white towels on the front door will be checked often. ONLY authorized persons will be allowed into the evacuated areas.

Officials of the Alabama Department of Public Health will monitor the affected areas, and you will be notified when to return home.

Browns Ferry evacuation map and routes

It is important that you follow the evacuation routes shown on the map. The 10-mile Emergency Planning Zone is divided into sectors. For quick reference, locate the sector in which you live or work and write it in the space provided below. Sector descriptions are listed on pages 5 and 6.

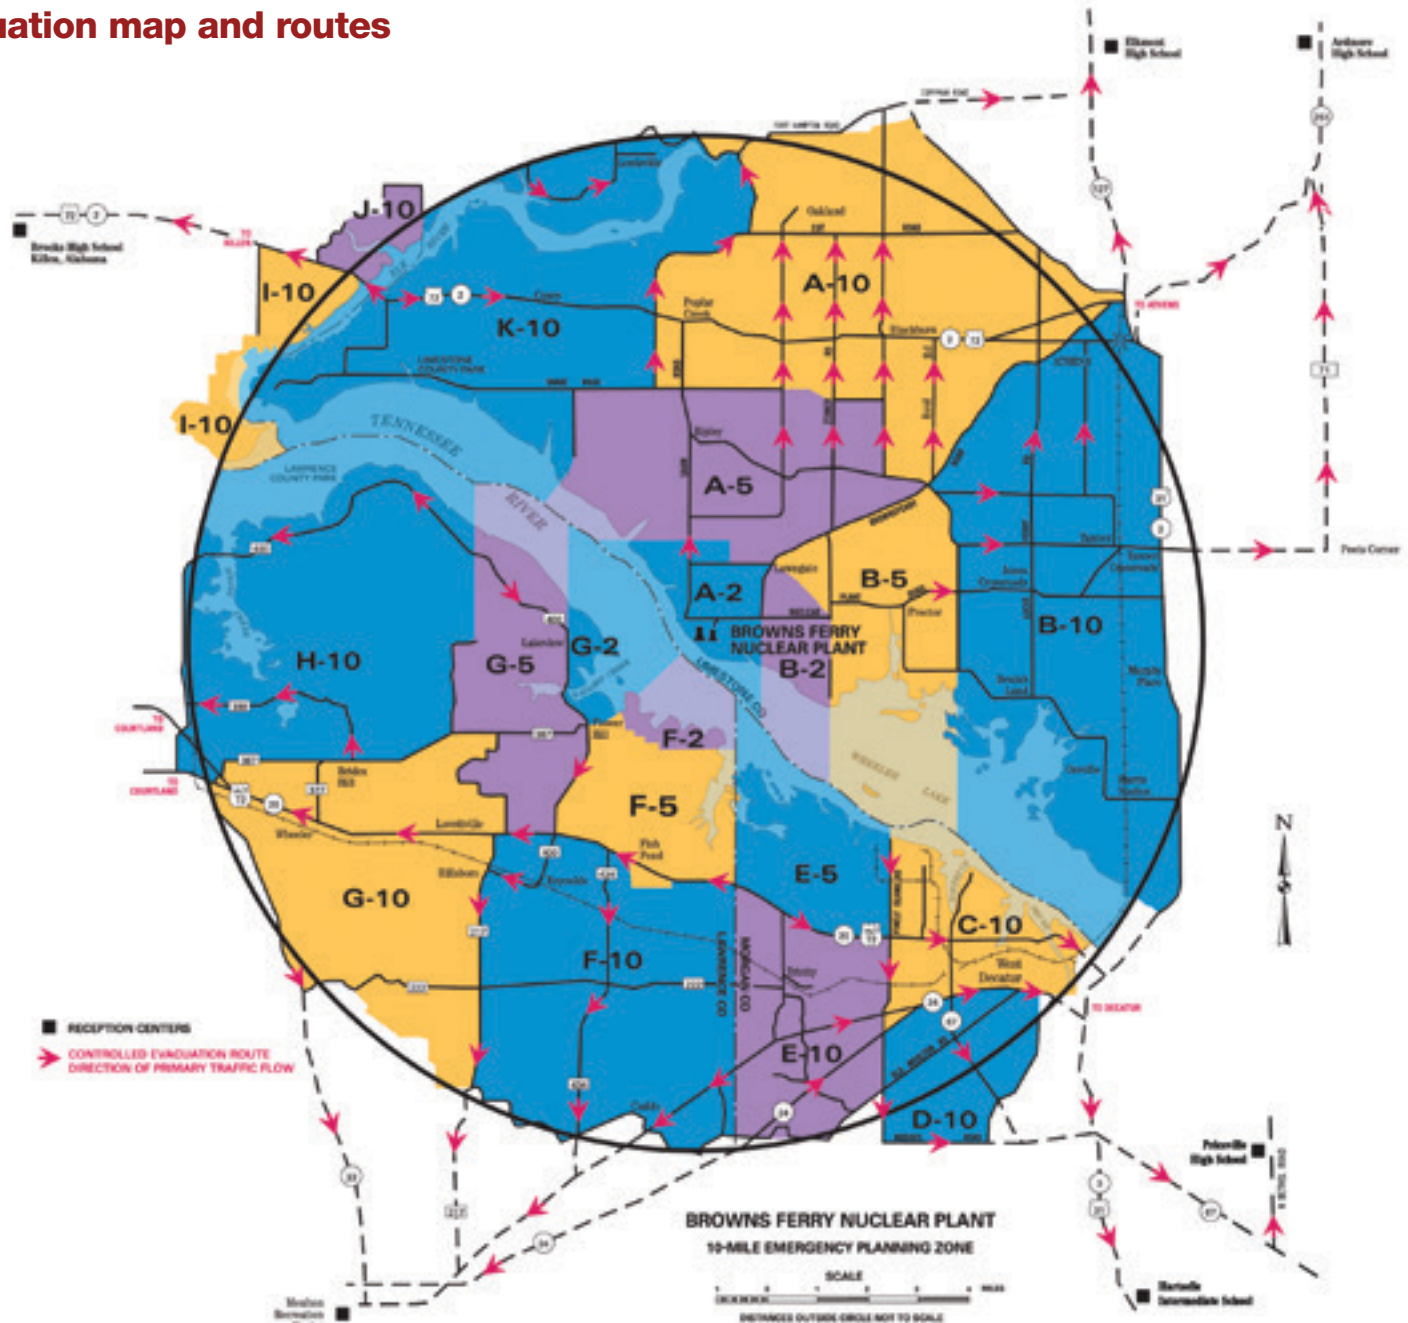

The evacuation routes for each sector are described on page 7. If an evacuation is ordered, locate the number for your sector and follow that route. Law enforcement personnel will patrol these roads and provide any assistance or guidance you need.

Local radio and TV stations will tell you the location of the reception center serving your area.

My sector number is:

HOME

WORK

Browns Ferry Emergency Planning Zone sectors

TWO-MILE ZONE

Sector A-2 – Limestone County

Area within a 2-mile radius of the Browns Ferry Nuclear Plant. Beginning at Shaw Road and Poplar Point Road, go due east to Mack Road, south on Mack Road, east on Lawngate Road to Brownsferry Road, then south on Brownsferry Road to Nuclear Plant Road, then due south to the Limestone and Morgan County line on the Tennessee River, then follow that line northwest to a point on the Tennessee River due west of Poplar Point Road, then east to the beginning point on Shaw Road.

Sector B-2 – Limestone County

Area within a 2-mile radius of the Browns Ferry Nuclear Plant. Beginning at the intersection of Lawngate Road and Brownsferry Road, go southeast to the intersection of Nuclear Plant Road and Cowford Road, then due south to the Limestone and Morgan County line on the Tennessee River, then follow that line northwest to the Limestone and Morgan County line on the Tennessee River that is due south of Brownsferry Road and Nuclear Plant Road, then north to the beginning point at the intersection of Lawngate Road and Brownsferry Road.

Sector F-2 – Lawrence County

Beginning on County Road 387 (east of Flower Hill), go southeast along the Wheeler Reservation boundary to the shoreline of the south side of the Tennessee River, then go northwest along the shoreline until it meanders back to the point of beginning at County Road 387.

Sector G-2 – Lawrence County

Beginning at a point on County Road 400 at Flower Hill at intersection of County Road 387, go east on County Road 387 to the south shoreline of the Tennessee River, then go west along the shoreline to the Mallard Creek Bridge (County Road 400). Proceed north on County Road 400 to power line, continue due north from power line to the south shoreline of the Tennessee River, then go east along

the shoreline of the Tennessee River as it meanders around the Mallard Creek Public Use Area, and back to the Mallard Creek Bridge on County Road 400.

FIVE-MILE ZONE

Sector A-5 – Limestone County

Area between a 2- and 5-mile radius of the Browns Ferry Nuclear Plant. Beginning at the intersection of Snake Road and Fielding Road, go east to past the dead end of Snake Road, then southeast to the intersection of Zehner Road and Grubbs Road, then east to Blackburn Road, then south to Ripley Road, then southeast to Brownsferry Road, then southwest to the intersection of Brownsferry Road and Lawngate Road, then west to Mack Road, north on Mack Road to a point due east of Popular Point Road, then west to the Limestone and Lawrence County line on the Tennessee River, then follow line northwest to the Limestone and Lawrence County line on the Tennessee River, southwest of the 90-degree turn on Friend Road, then northeast to the 90-degree turn on Friend Road, then due north to the intersection of Friend Road and Snake Road.

Sector B-5 – Limestone County

Area between a 2- and 5-mile radius of the Browns Ferry Nuclear Plant and southeast of Brownsferry Road. Beginning at the intersection of Brownsferry Road and Lawngate Road, go northeast to the intersection of Ripley Road and Brownsferry Road, then southeast on Ripley Road to Huntsville Brownsferry Road, then south to Neely Road, then due south to Beulah Bay, then west around Beulah Bay, then south to the Limestone and Morgan County line on the Tennessee River, then northwest to the Limestone and Morgan County line on the Tennessee River, due south of Cowford Road, then north to the intersection of Cowford Road and Nuclear Plant Road, then northwest to the beginning point of Lawngate Road and Brownsferry Road.

Sector E-5 – Morgan County

Beginning at the intersection of Lawrence County line and State Highway 20, go north along the county line

to the Limestone County line on the Tennessee River, east along the county line (on water) to Finley Island Road, south on Finley Island Road to State Highway 20, west on Highway 20 to point of beginning.

Sector F-5 – Lawrence County

Beginning at Flower Hill on County Road 400, go east on County Road 387 to the Wheeler Reservation boundary, then follow the Wheeler Reservation boundary to the Lawrence-Morgan County line. Follow the Lawrence-Morgan County line south to State Highway 20, then go west on State Highway 20 to County Road 432 to the intersection of County Road 433, then west and north on County Road 433 until it intersects again with State Highway 20. Go west on State Highway 20 to the intersection of County Road 400, then north on County Road 400 to Flower Hill.

Sector G-5 – Lawrence County

Beginning at Flower Hill, proceed south on Mallard Creek Road (County Road 400) to State Highway 20. Go west on State Highway 20 approximately 1 mile to County Road 383, north approximately 3/4 mile to the intersection of County Road 384, then west, north and east along County Road 384. Go back to County Road 383, then north on County Road 383 to the intersection of County Road 387, then west approximately 1 mile on County Road 387 to intersection of County Road 423. Go north and east to the end of County Road 423, then due north to the Lawrence County line on the Tennessee River, then east-southeast along the Lawrence County line to the power line on County Road 400, then south on Mallard Creek Road (County Road 400) back to Flower Hill.

10-MILE ZONE

Sector A-10 – Limestone County

Area between a 5- and 10-mile radius of the Browns Ferry Nuclear Plant. Beginning at the intersection of Gordon Road and Snake Road, go north to New Cut Road, then follow New Cut Road to Baker Hill Road, then north to Elk River Mills Road, then northwest to 10-mile radius, then east on the 10-mile radius to Elk River Mills Road, then east to Highway 99, then southeast to Jefferson Street, then south on Jefferson Street, then west on Washington Street, then south on Madison Street to Brownsferry Road, then southwest to Ripley Road, then west to Blackburn Road, then north to Grubbs Road, then east to Zehner Road, then northwest to a point just past the dead end of Snake Road, then west to Gordon Road.

Sector B-10 – Limestone County

Area between a 5- and 10-mile radius of Browns Ferry Nuclear Plant. Beginning at Ripley Road and Brownsferry Road, go northeast to Madison Street, then north to Washington Street, then east on Washington Street, then south on Clinton Street to U.S. 72 East, then south on U.S. 31, then south to bank of the river, then follow bank of river to 10-mile radius, then south to the Limestone and Morgan County line on the Tennessee River, then northwest to the Limestone and Morgan County line on the Tennessee River, due south of Neely and Settle Road, then north to Beulah Bay, then west around Beulah Bay, then north to the intersection of Huntsville Brownsferry Road and Neely Road, then northwest on Huntsville Brownsferry Road to beginning point at Brownsferry Road.

Sector C-10 – Morgan County

Beginning at Limestone County line and Finley Island Road, go south on Finley Island Road to Woodall Road, south on Woodall Road to State Highway 24, east on Highway 24 to Moulton Street (Highway 24). Go east on Moulton Street to the railroad, north on the railroad to the Tennessee River, northwest on river to Finley Island Road and Limestone County.

Sector D-10 – Morgan County

Beginning at Woodall Road and Highway 24, go south on Woodall Road (Shady Grove Lane) to Modaus Road, east on Modaus Road to Danville Road, north on Danville Road (Memorial Drive) to Moulton Street, west on Moulton

Street (Highway 24) to Woodall Road and Highway 24.

Sector E-10 – Morgan County

Beginning at intersection of State Highway 20 and Lawrence County line, go south along county line to State Highway 24, then northeast on Highway 24 to Whitlow Road. Follow Whitlow Road to Hudson Road, go east along Hudson Road to Old Moulton Road, then go northeast on Old Moulton Road to Woodall Road, north on Woodall Road to State Highway 20, west on Highway 20 to Lawrence County line.

Sector F-10 – Lawrence County

Beginning on State Highway 20 at the Lawrence-Morgan County line, go west on State Highway 20 to County Road 432, then south on 432 to the intersection of County Road 433, then west and north on County Road 433 until it intersects again with State Highway 20. Go west on State Highway 20 to the intersection of County Road 217, then south on County Road 217 to the intersection of County Road 301 at Sulphur Spring. Follow County Road 301 until the road runs into County Road 299, then follow County Road 299 until the road runs into County Road 214; remain on County Road 214 east to Lawrence-Morgan County line, then north along the Lawrence-Morgan County line to the point of beginning on State Highway 20.

Sector G-10 – Lawrence County

Beginning at the intersection of State Highway 20 and County Road 383, go north on County Road 383 to intersection of County Road 384, then north and east along County Road 384 back to County Road 383. Go north on County Road 383 to the intersection of County Road 387, then west on County Road 387 to State Highway 20, then west on State Highway 20 to the intersection of State Highway 33. Proceed south on State Highway 33 to the intersection of County Road 222, then east on County Road 222 to the intersection of County Road 294, then follow a line southeast by Blowing Springs Branch to the intersection of County Road 217 at Sulphur Springs. Go north on County Road 217 to State Highway 20, then east on State Highway 20 to point of beginning.

Sector H-10 – Lawrence County

Beginning at the intersection of County Road 387 in the vicinity of Terry Heights subdivision, go east along

County Road 387 5.4 miles to County Road 423, then north to the end of County Road 423. Proceed due north to the Lawrence County line at the Tennessee River, then westerly along the county line to a point due north of the TVA Public Use Area, then south to the Spring Creek Road bridge. Follow Spring Creek Road (County Road 400) south to County Road 389, south on County Road 389 to Jefferson Street, then east on Jefferson Street to State Highway 33, to Terry Heights subdivision.

Sector I-10 – Lauderdale County

Beginning at Elk River Bridge at U.S. 72, go west to County Road 77, south on County Road 77 to Barnett Road, south on Barnett Road to curve in the road, then a southwest angle to the intersection of County Road 632 and County Road 91. Go north on County Road 91 to intersection of Longshore Drive, then south on Longshore Drive to Tennessee River to Lauderdale County line. Follow Lauderdale County line east, then north to beginning point at U.S. 72 at Elk River Bridge.

Sector J-10 – Lauderdale County

Beginning at Elk River Bridge at U.S. 72, go west on U.S. 72 to County Road 70, north on County Road 70 to the intersection of County Road 70 and County Road 566, then east on County Road 566 to Richter Road at Lauderdale County line. Go south on Richter Road following Lauderdale County line to Elk River, and then following Lauderdale County line to beginning point at Elk River Bridge at U.S. 72.

Sector K-10 – Limestone County

Area between a 5- and 10-mile radius of the Browns Ferry Nuclear Plant. Beginning at the intersection of Gordon Road and Snake Road, go west to Friend Road, then south to 90-degree turn on Friend Road, then southwest to the Limestone and Lawrence County line on the Tennessee River, then west along river line to the center of Elk River, then northwest along center to bank of Elk River. Follow shore along west bank of Elk River to Richter Road, then north to the 10-mile radius and follow to Elk River Mills Road, then southeast to Baker Hill Road, then south to New Cut Road, then southwest to Gordon Road, then south to beginning point of Gordon Road and Snake Road.

Evacuation routes

I-10 Lauderdale County

Take County Road 91, County Road 70 and County Road 77 to U.S. 72. Proceed west to Brooks High School, 4300 U.S. 72, Killen, AL 35645.

J-10 Lauderdale County

Take County Road 70 to U.S. 72 West to Brooks High School, 4300 U.S. 72, Killen, AL 35645.

F-2, F-5 Lawrence County

Take shortest route to State Highway 20 (Alternate U.S. 72). Go west on State Highway 20 to County Road 217 to State Highway 24. Go west on State Highway 24 to State Highway 157, south on State Highway 157 to Court Street, west on Court Street. Follow instructions of traffic control personnel to the Moulton Recreation Center, 13550 Court St., Moulton, AL 35650.

F-10 Lawrence County

Travel south to State Highway 24. Go west on State Highway 24 to State Highway 157. Turn south on State Highway 157. Follow instructions of traffic control personnel to the Moulton Recreation Center, 13550 Court St., Moulton Recreation Center, 13550 Court St., Moulton, AL 35650.

G-2 Lawrence County

Travel south to State Highway 20. Go west on State Highway 20 to County Road 217, south on County Road 217 to State Highway 24, west on State Highway 24 to State Highway 157. Go south on State Highway 157 to Court Street. Turn west on Court Street to the Moulton Recreation Center, 13550 Court St., Moulton, AL 35650.

G-5 Lawrence County

Take the most direct route to County Road 400, then proceed east on County Road 400 to State Highway 20. Go west on State Highway 20 to County Road 217, south on County Road 217 to State Highway 24, west on State Highway 24 to State Highway 157, where you will be directed to the Moulton Recreation Center, 13550 Court St., Moulton, AL 35650.

Follow the evacuation routes shown on the map. Traffic may also be directed by emergency workers. Go to the nearest reception center and register as an evacuee.

G-10 Lawrence County

Travel to State Highway 20. Go west on State Highway 20 to State Highway 33, then south on State Highway 33 to the Moulton Recreation Center, 13550 Court St., Moulton, AL 35650.

H-10 Lawrence County

Proceed west to County Road 400, then south on County Road 400 to County Road 389. Go south on County Road 389 to State Highway 20, east on State Highway 20 to State Highway 33, south on State Highway 33 to the Moulton Recreation Center, 13550 Court St., Moulton, AL 35650.

A-2 Limestone County

Proceed north and follow evacuation route signs to the reception center at Elkmont High School, 25630 Evans Ave., Elkmont, AL 35620.

A-5 Limestone County

Proceed north and follow the evacuation route signs to the reception center at Elkmont High School, 25630 Evans Ave., Elkmont, AL 35620.

A-10 Limestone County

Proceed north and follow the evacuation route signs to the reception center at Elkmont High School, 25630 Evans Ave., Elkmont, AL 35620.

B-2 Limestone County

Proceed east and follow the evacuation route signs to the reception center at Ardmore High School, 30285 Ardmore Ave., Ardmore, AL 35739.

B-5 Limestone County

Proceed east and follow the evacuation route signs to the reception center at Ardmore High School, 30285 Ardmore Ave., Ardmore, AL 35739.

B-10 Limestone County

Proceed east and follow the evacuation route signs to the reception center at Ardmore High School, 30285 Ardmore Ave., Ardmore, AL 35739.

K-10 Limestone County

Proceed to U.S. 72. If located west of Lucy's Branch Marina, head west on U.S. 72 to Brooks High School in Killen. All others should travel east and follow evacuation route signs to Elkmont High School, 25630 Evans Ave., Elkmont, AL 35620.

E-5 Morgan County

Travel south on Finley Island Road or east on State Highway 20 to Woodall Road, then south to Modaus Road. Go east on Modaus Road to State Highway 67, east on State Highway 67 to U.S. 31, south on U.S. 31 to Highway 36, east on Highway 36 to Bethel Road, north on Bethel Road to Hartselle High School, 1000 Bethel Rd. NE, Hartselle, AL 35640.

E-10 Morgan County

Travel east on State Highway 24 to Woodall Road, south on Woodall Road to Modaus Road, then east to State Highway 67. Go east on State Highway 67 to U.S. 31, then south on U.S. 31 to Highway 36, east on Highway 36 to Bethel Road, north on Bethel Road to Hartselle High School, 1000 Bethel Rd. NE, Hartselle, AL 35640.

C-10 Morgan County

Travel east on State Highway 20 or 24 to U.S. 31. Go south on U.S. 31 to State Highway 67, then east on State Highway 67 to N. Bethel Road. Go north on N. Bethel Road to Priceville High School, 2650 N. Bethel Road, Decatur, AL 35603.

D-10 Morgan County

Take shortest route to either Danville Road or Old Moulton Road to State Highway 67. Go east on State Highway 67 to U.S. 31, south on U.S. 31 to Highway 36, east on Highway 36 to Bethel Road, north on Bethel Road to Hartselle High School, 1000 Bethel Rd. NE, Hartselle, AL 35640.

If you will need additional assistance during an emergency

Your health and safety are very important to us. We realize that some of you who live near Browns Ferry Nuclear Plant may have disabilities or access and functional needs. To assist and provide care for you, we must make certain plans in advance.

If you or someone you know lives within 10 miles of Browns Ferry and will need additional assistance during an emergency, please fill out and mail one of the two cards provided in this calendar. After you have answered the questions on the card, drop it in a mailbox. The card is pre-addressed, and the postage has been paid. You need to mail this card as soon as possible so proper arrangements can be made.

Please fill out and return the card even though you may have returned the card from a previous calendar.

For farmers and home gardeners

If an incident occurs at Browns Ferry Nuclear Plant, your local emergency management agency will issue directions for contacting your agricultural extension agent for information on how to protect your crops and livestock. For more information, listen to your local radio and TV stations and visit: alabamapublichealth.gov/radiation/assets/agbooklet.pdf.

Your crops

- An unharvested crop is hard to protect. However, normal harvesting and processing still may be possible if time permits.

This will enable your emergency officials to maintain a current list of individuals who would need assistance. If you have any questions or need additional cards, please contact one of the emergency management agencies listed here.

Florence-Lauderdale County Emergency Management Agency: 256-760-6363

Lawrence County Emergency Management Agency: 256-974-7641

Limestone County Emergency Management Agency: 256-232-2631

Morgan County Emergency Management Agency: 256-351-4620

- Crops already harvested will be safer if they are stored inside.
- You should wash and peel vegetables and fruits from your garden before use if they were not already harvested.

To protect your livestock

- Provide as much shelter as possible. If you do not have enough space in barns or sheds, use natural shelters such as wooded areas or road underpasses.
- Provide plenty of food and water and make sure shelters are well ventilated.
- Milk animals should be given first priority.
- Use stored feed when possible.

Emergency supplies checklist

To help you prepare for any type of emergency, we have provided two lists of supplies. One lists items you may need to keep in your home to aid your response. The second lists supplies to take with you if you are asked to leave the area. Check the supplies you would need and add supplies not listed.

Emergency supplies for your home

- Weather alert radio
- First-aid kit
- Toolbox
- Candles and matches
- Portable radio, flashlight, extra batteries
- _____

Evacuation supplies

- This calendar
- Prescription and over-the-counter medications
- Personal health products (shaving cream, toothbrush, etc.)
- Necessary foods for dietary restrictions
- Blankets and pillows
- Cash, checkbook, credit cards, important papers
- Items for children (favorite toy, books)
- Change of clothing
- _____

If given potassium iodide tablets: During a nuclear emergency, you might be exposed to radiation that could harm your thyroid gland, and public health officials may direct you to take potassium iodide (KI) tablets. The tablets can reduce the amount of radioactive iodine absorbed by your thyroid gland.

The tablets will be given only to those persons from the affected areas who may have been exposed to radioactive iodine. It is important that you know the sector that you evacuated from, and that you read and understand the consent form you will receive prior to taking the tablets. Take the tablets only as directed.

Any questions concerning potassium iodide, including allergies to iodine or other contraindications, should be referred to the health department.

? General information

How emergencies are classified

If there is an incident at Browns Ferry Nuclear Plant, it will be placed in one of four categories that have been established by the United States Nuclear Regulatory Commission and adopted by the state of Alabama and TVA.

For your information and reference, here are the four emergency levels in order from least to most severe.

- 1. A Notification of Unusual Event** is the least serious of the four classifications. Because of strict federal regulations, any event out of the ordinary is reported to federal, state and local authorities. The event poses no risk to you or to plant employees. It means that a minor problem exists. Appropriate officials and personnel are notified.
- 2. An Alert** is declared when an event has occurred that could reduce the level of safety of the plant, but backup plant systems are available. Emergency agencies are notified and asked to stay in touch, but no action by the public is necessary.
- 3. A Site-Area Emergency** is declared when there is a problem with plant safety systems and a release of some radioactivity into the air or water is possible. The sirens will be sounded. You should listen to radio and television stations for information and instructions.
- 4. A General Emergency** is declared when an event at the plant has caused a loss of several safety systems that could lead to a release of radiation. State and local authorities will take action to protect the residents living near the plant. People in affected areas will be advised by authorities to stay indoors or to evacuate.

Glossary

Background radiation – This is radiation from natural sources. It comes from the sun’s rays, and it’s in the ground, building materials and the human body.

Core – The central part of a nuclear reactor that contains the uranium fuel.

Fission – The nuclear process in which a heavy atom, such as uranium, splits into fragments.

Fuel assembly – A collection of rods that contain the nuclear fuel pellets. The fuel pellets produce heat to make the steam used to generate electricity.

Fuel pellets – Thimble-size uranium dioxide pellets used in nuclear power generation. Each pellet contains about the same amount of energy as that produced from burning 1 ton of coal. A modern reactor core may contain up to 17.5 million pellets.

Fuel rods – Hollow tubes that contain stacks of uranium dioxide fuel pellets. These rods are bundled together to form fuel assemblies.

Half-life – The time required for a radioactive substance to lose one-half of its radioactivity. Half-life can vary from minutes to years, depending on the substance.

What is radiation?

Radiation is energy traveling in the form of invisible particles or rays after the breakdown of radioactive atoms. Everyone is exposed to small amounts of radiation every day. Air, water, food and sunshine are a few sources of natural background radiation. The dose humans receive from radiation is commonly measured in “millirem.”

According to recent studies, the average radiation dose to a member of the public in the United States is about 620 millirem per year.

Radiation also comes from man-made sources such as building and road construction materials, smoke detectors, televisions, and luminous watches (to name a few). Medical procedures such as X-rays and diagnostic tests can result in 0.5 to 1,000 millirem of radiation, depending on a person’s treatment for disease or injury.

People are concerned about radiation exposure because it can alter or damage human cell structure. That is why workers at nuclear power plants are carefully monitored and trained to limit their exposure to a level that is as low as is reasonably achievable. The Nuclear Regulatory Commission, which issues licenses to all nuclear power plants, has set a maximum safe individual dose of 5,000

millirem a year, measured over the entire body. To avoid coming even close to this level, TVA work procedures set an administrative limit of 1,000 millirem per year for any worker, with any additional dose requiring written approval.

A nuclear power plant’s containment building, reactor vessel and fuel assemblies are barriers designed to contain radiation and protect plant workers and persons living near the plant from any exposures to elevated levels of radiation. Repeated surveys around TVA’s operating nuclear plants have shown no detectable increase in radiation above normal background levels.

SOURCES OF RADIATION

How Browns Ferry works

Browns Ferry operates much like a fossil-fueled power plant. In a fossil plant, coal, oil or gas is burned to make heat. The heat turns water into steam, the steam drives a turbine, and the turbine spins an electrical generator, producing electric power.

The operation is the same at Browns Ferry, except the heat is provided by a process called fission, and the fuel is uranium. The uranium is sealed inside long metal tubes, called fuel rods. These rods are placed into the reactor vessel, making up the fuel core.

When a uranium atom is struck by a small particle called a neutron, it can give off heat and more neutrons. Those neutrons can strike other uranium atoms, causing them to continue the chain reaction. The reaction is started and stopped by control rods

that can be moved in and out of the fuel core. These control rods are made of a material that absorbs neutrons. When inserted into the core, they stop the chain reaction.

It is physically IMPOSSIBLE for the nuclear fuel at Browns Ferry to explode like a nuclear bomb. The fuel for Browns Ferry and other similar nuclear power plants is only about 3 percent to 5 percent fissionable uranium. Nuclear weapons have in excess of 90 percent fissionable uranium. The illustration above shows how the heat from the fission process is used to make steam and generate electricity at Browns Ferry.

Water (pink) is pumped through the core and heated by the fuel. The water boils in the reactor to produce

steam. The steam is piped to the turbine, where the force of the expanding steam turns the turbine.

To produce electricity, the turbine turns the generator, which is an electromagnet inside a coil of wire. After the steam passes through the turbine, the steam is cooled back into water by circulating around tubes carrying cool water (blue) from Wheeler Reservoir (the river).

The condensed steam, which is now water, is pumped back to the reactor to repeat the cycle. The condenser cooling water may be passed through the cooling towers before it is returned to the reservoir.

The reactor coolant water is radioactive and is NOT allowed to mix with the condenser cooling water that is returned to the reservoir.
