## POWER UTILIZATION ENGINEER

If you're interested in how we can use energy in new and interesting ways, consider becoming a power utilization engineer like Drew Frye. He studies the latest technologies in the power industry, including smart thermostats, better batteries and new ways to generate energy efficiently. A key interest of his? Electric cars. "Electrification of transportation can really change the energy equation in the U.S., help improve the environment, and attract jobs and investment to our communities," he says. "I'm proud of working on electric transportation initiatives." Now that's driving change!
